

THE HOUSING COOPERATIVE'S sorting chart

COMBUSTIBLE WASTE

Combustible waste (i.e. household waste) is used to produce energy at the waste to energy plant.

For example

- dirty plastic and carton packages, plastic products and styrofoam
- small PVC plastic products, for example toys, rain clothing, coated fabric cloths
- used hygiene products for example diapers and menstrual pads
- other non-recyclable, combustible waste

PACKAGING WASTE

TAKEN TO THE HOUSING COOPERATIVE'S BIN, TO A RECYCLING POINT OR TO WASTE STATION.

Carton packages

For example

- milk cartons and juice boxes
- cereal and cookie boxes
- cardboard packaging
- other cartons

To be recycled empty, clean and dry. Flatten the packages and pack them inside each other.

You can sort carton to combustible waste, unless the property has a collection bin of their own or a recycling point nearby.

BIOWASTE

For example

- food leftovers and other foodstuff
- coffee grains, coffee filters and tea bags
- fruit and vegetable peels

Drain the liquids so that the waste mass won't become too wet. If you want, you can pack the biowaste into a bag folded out of newspaper. For instructions, go to www.etappi.com.

Biowaste is combustible waste, unless the property has its own compost or collection bin.

Glass packages

- glass jars and bottles

To be recycled empty, clean and dry. Remove the caps and lids.

Metal packages

For example

- tin cans, caps and lids
- aluminum dishes and foils
- spray cans
- other small metal objects

To be recycled empty, clean and dry.

PAPER

TAKEN TO THE HOUSING COOPERATIVE'S BIN TO A RECYCLING POINT OR TO WASTE STATION.

- all paper that is delivered to the household through the mailbox

Plastic packages

For example

- plastic food packaging, detergent packaging
- plastic bags and wrappings
- plastic bottles, cans, canisters and jars
- styrofoam packaging

To be recycled empty, clean and dry. Caps and lids detached.

You can sort plastic packages to combustible waste, unless the property has a collection bin of their own or a recycling point nearby.

Recycling points are for household packaging waste and paper. You can usually find them in the yard of supermarkets.

Take large and hazardous waste to a waste station.

You can take all pharmaceutical waste to a pharmacy free of charge.
